

# MovieRama

---

MovieRama is a blog where users can sign up and share descriptions about movies. Furthermore, users can express their like for a movie post or their dislike.

## System configuration for development

---

The application was developed in Java using Spring MVC framework, Maven, Tomcat, Hibernate and MySQL.

OS of development: Windows 10

IDE: Eclipse IDE 2021 -12 <https://www.eclipse.org/downloads/>

Database: MySQL <https://dev.mysql.com/downloads/>

MySQL Server: 8.0

MySQL Workbench: 8.0

Java: JDK 17 <https://www.oracle.com/java/technologies/downloads/>

Maven: 3.8.1 <https://maven.apache.org/download.cgi>

Spring Framework: 5.3.9 <https://repo.spring.io/ui/native/release/org/springframework/spring/>  
Download the latest zip

Apache Tomcat: 9.0.56 <https://tomcat.apache.org/download-90.cgi>

Hibernate ORM: 5.6.2.Final <https://hibernate.org/orm/releases/5.6/>

Latest stable version, download zip archive

After installing the zip archives for all the above from the referenced websites, unzip them in hard drive 'C:\' or in 'C:\Program Files'.

Go to 'Edit the system environment variables->Environment Variables...->System variables->New...'

Add more than one path by separating them with ';'.

Set JAVA\_HOME variable 'C:\Program Files\Java\jdk-17.0.1'.

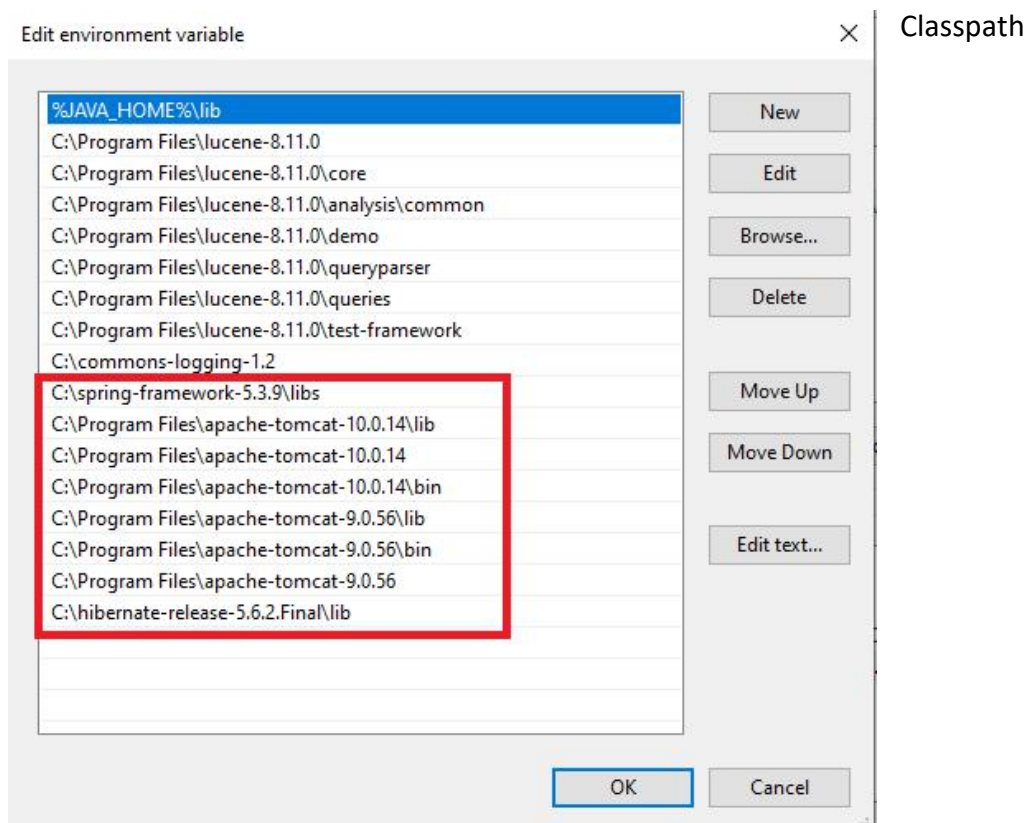

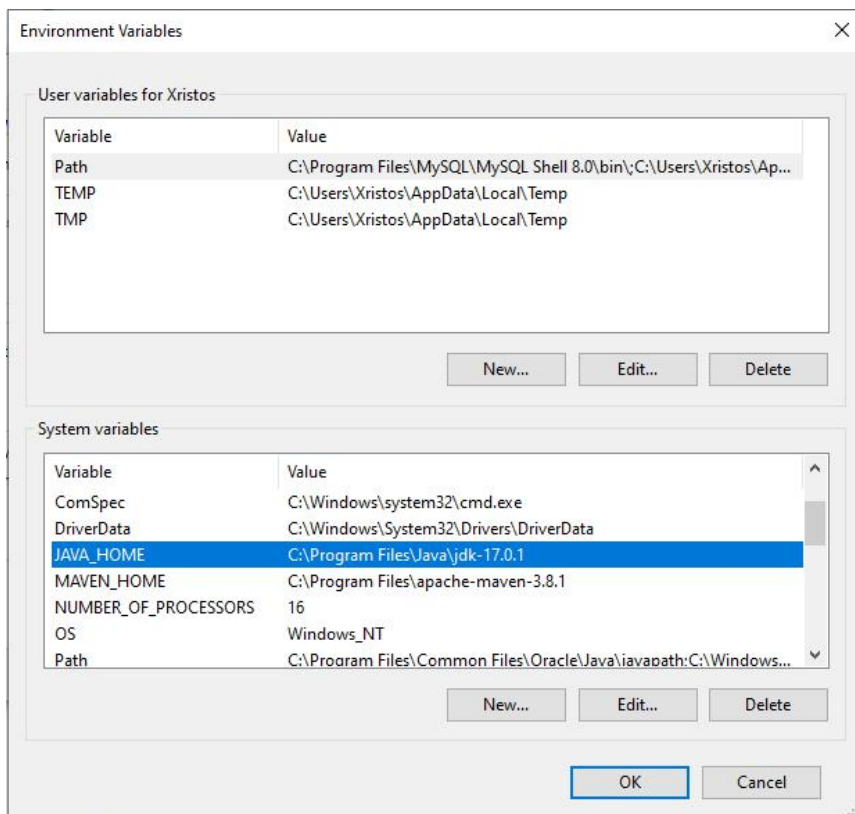

Add JAVA\_HOME to the Path variable by inserting '%JAVA\_HOME%\bin'.

Set MAVEN\_HOME variable 'C:\Program Files\apache-maven-3.8.1'.

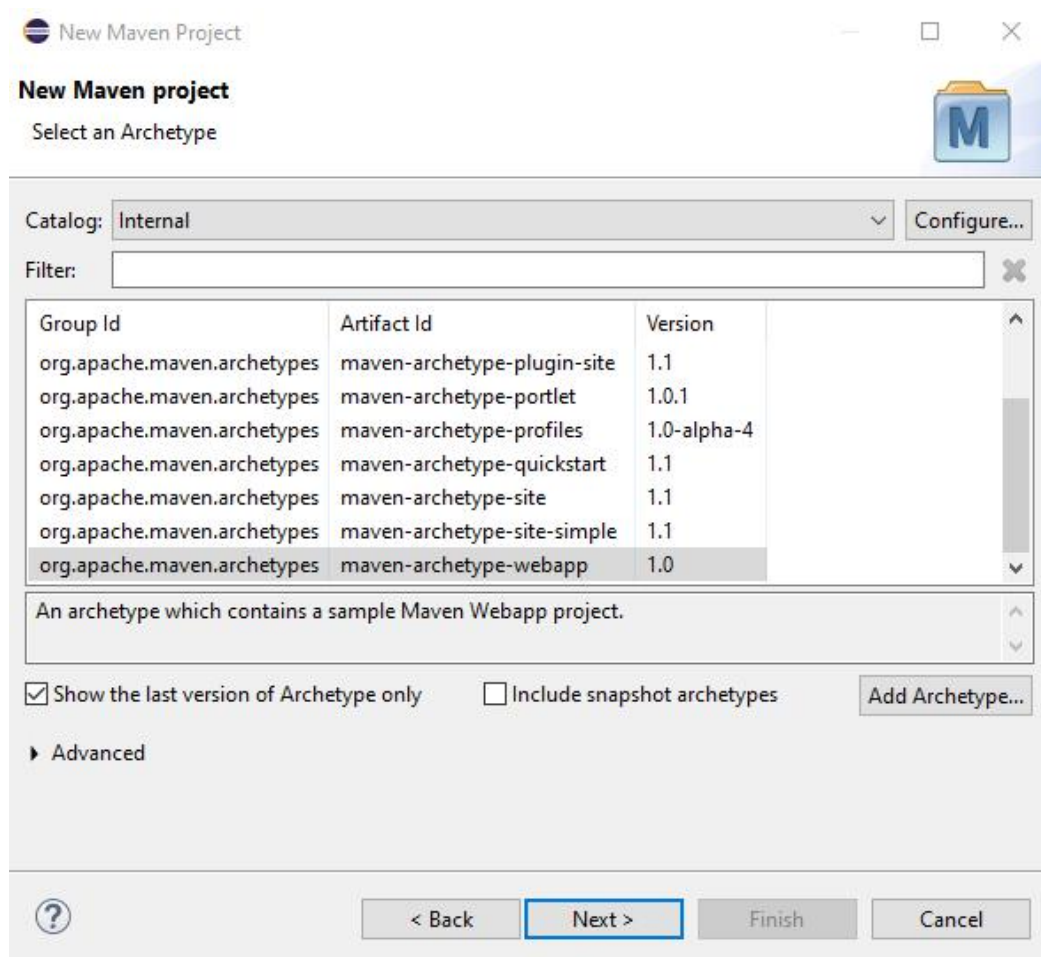

Add MAVEN\_HOME to the Path variable by inserting '%MAVEN\_HOME%\bin'.

Add MySQL to the Path variable by inserting 'C:\Program Files\MySQL\MySQL Server 8.0\bin'.

Set the CLASSPATH for spring, tomcat and hibernate.

Open Eclipse and then from menu select 'File->New->Project...->Maven->Maven Project->Next->GroupId: org.apache.maven.archetypes, Artifact Id: maven-archetype-webapp ->Next->Fill Group Id and Artifact Id -> Finish'

Add required dependencies to pom.xml file

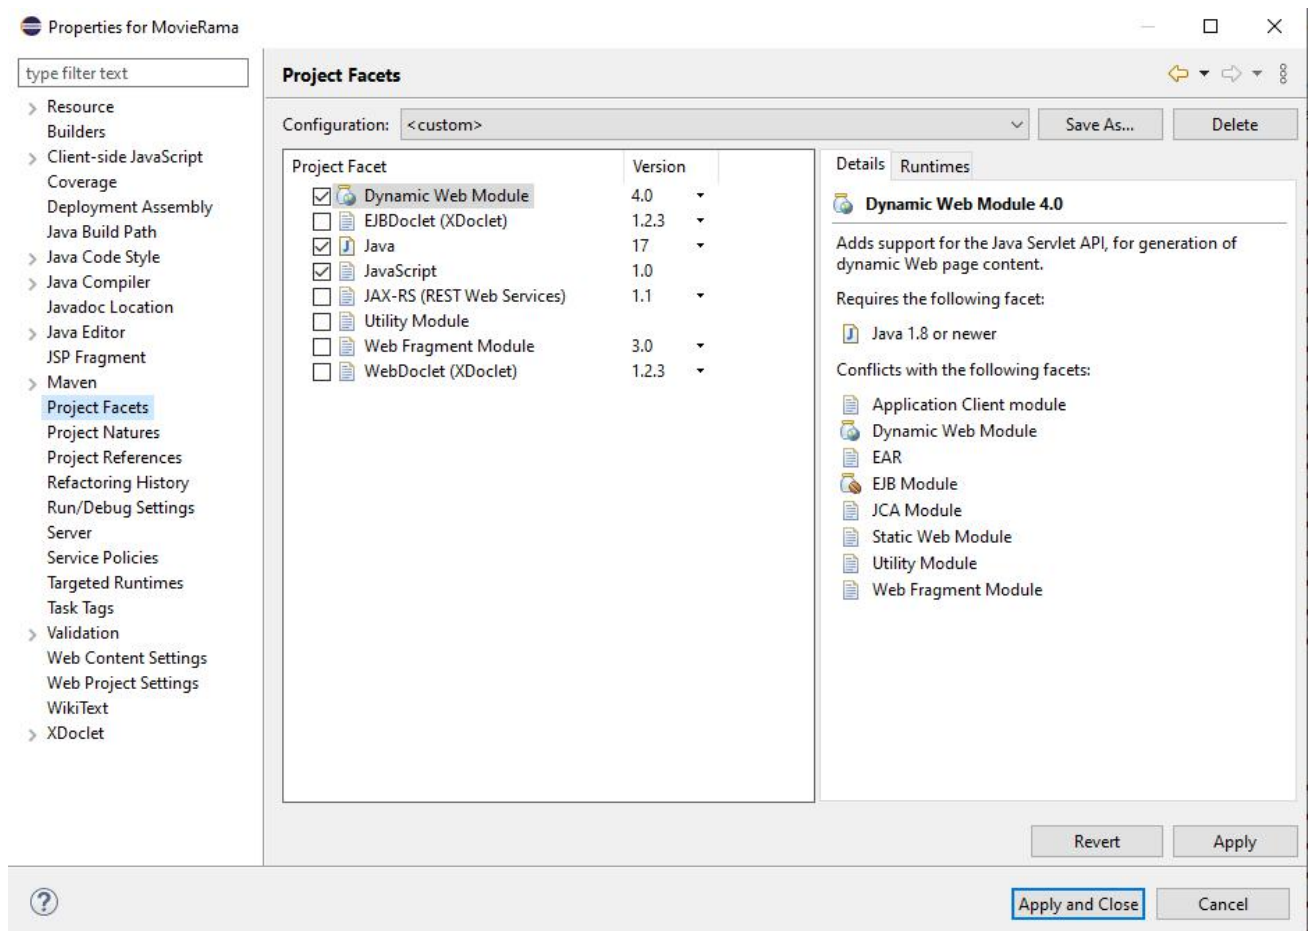

Visit <https://mvnrepository.com/> to find the right version for the dependencies.

We need to add dependencies for

- Commons dbcp
- MySQL java connector
- Hibernate jpa
- Hibernate core
- Hibernate validator
- Hibernate entity manager
- Taglibs standard

- Validation api
- Spring
- Spring context
- Spring orm
- Spring jdbc
- Spring webmvc
- Spring core
- Spring web
- Java servlet api
- Jstl api
- Jsp api
- Tomcat servlet api
- Tomcat jasper
- Maven compiler plugin

In Eclipse 'right click on project folder -> Build Path -> Configure Build Path... -> Project Facets -> checkbox Dynamic Web Module'

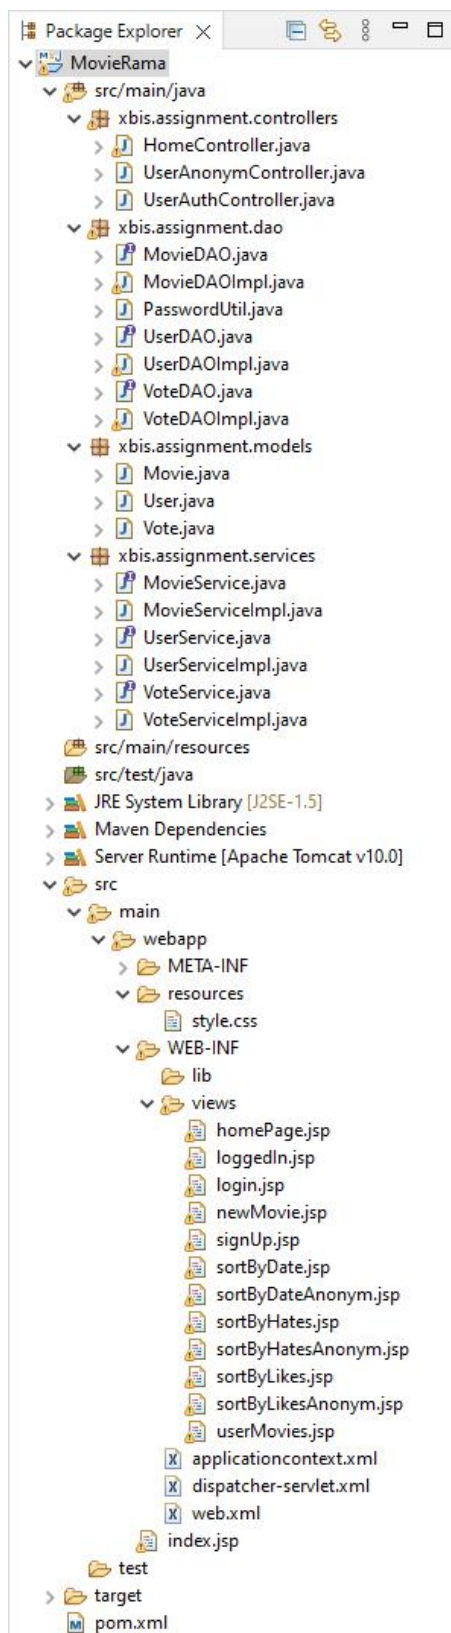

Lastly, setup Tomcat server for running and testing the application.

In Eclipse menu 'Window -> Show View -> Other... -> Server dir -> Servers -> Open'

In the Servers window that opens in the IDE click setup new, choose your Tomcat version and browse to the Tomcat directory in your disk.

Setup your project file module as below.

# Installation guide for testing

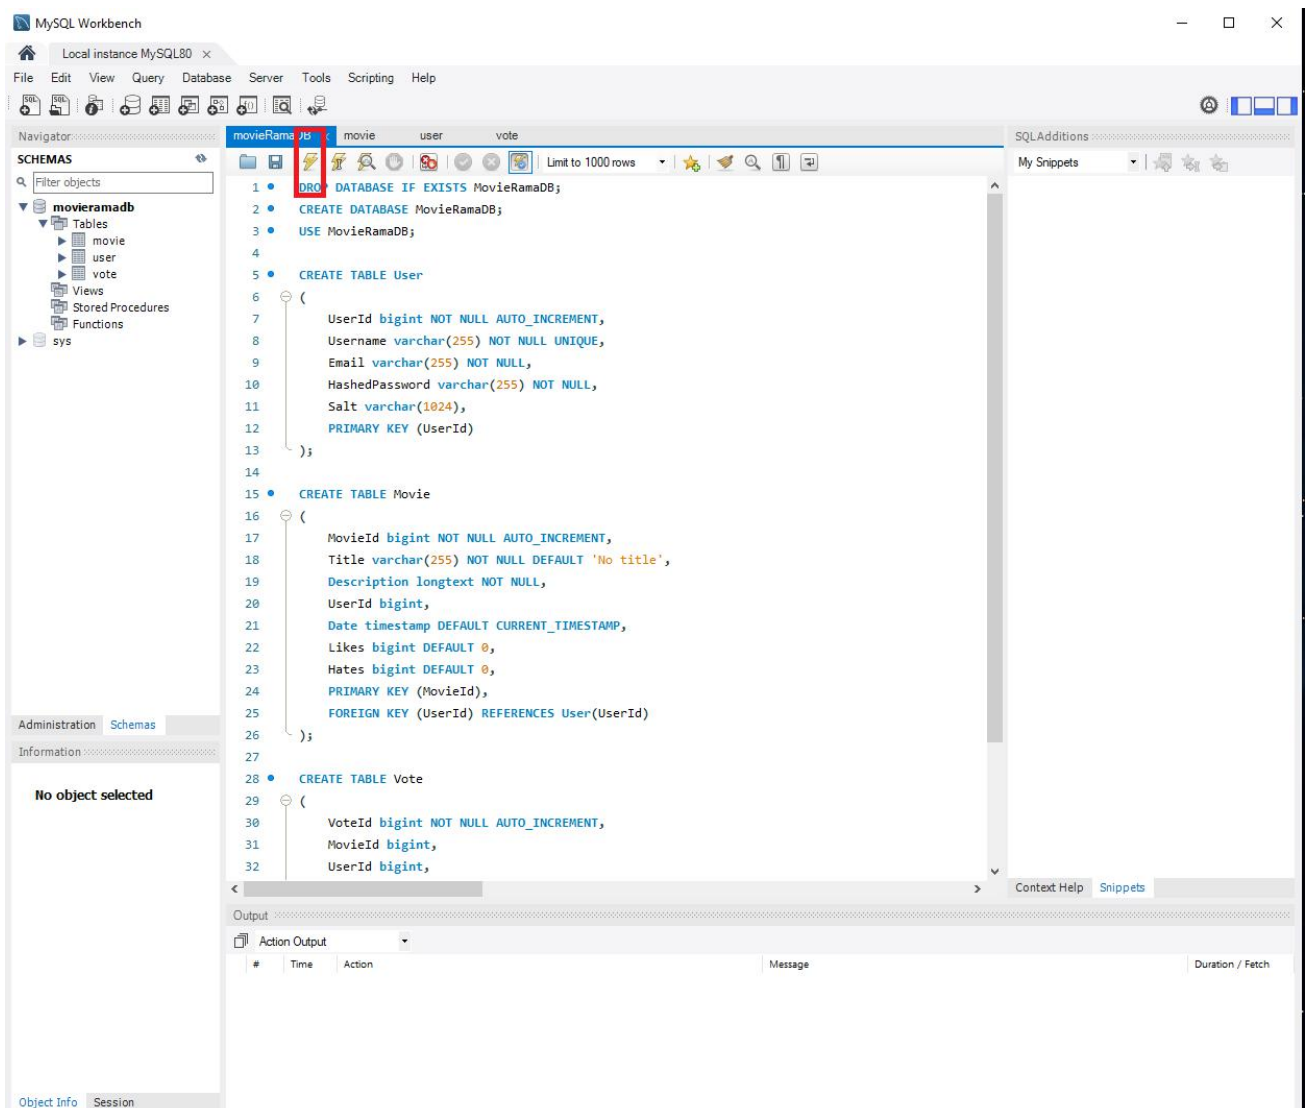

For Apache Tomcat the latest version is 10, but in order for this application to work you have to downgrade to Tomcat 9.

For testing, install all above listed tools and technologies from the referenced links. Set JAVA\_HOME, MAVEN\_HOME, Path and CLASSPATH variables as instructed above. Open Eclipse, set an EclipseWorkspace and on the menu go to 'File->Import...->Maven dir->Existing Maven Project->Browse...' to the project directory-> Finish'

You might need to set the Tomcat server on Eclipse following the above instructions.

Open MySQL Workbench, on the menu 'File-> Open SQL Script...->browse to the script'

Run the script to create the database.

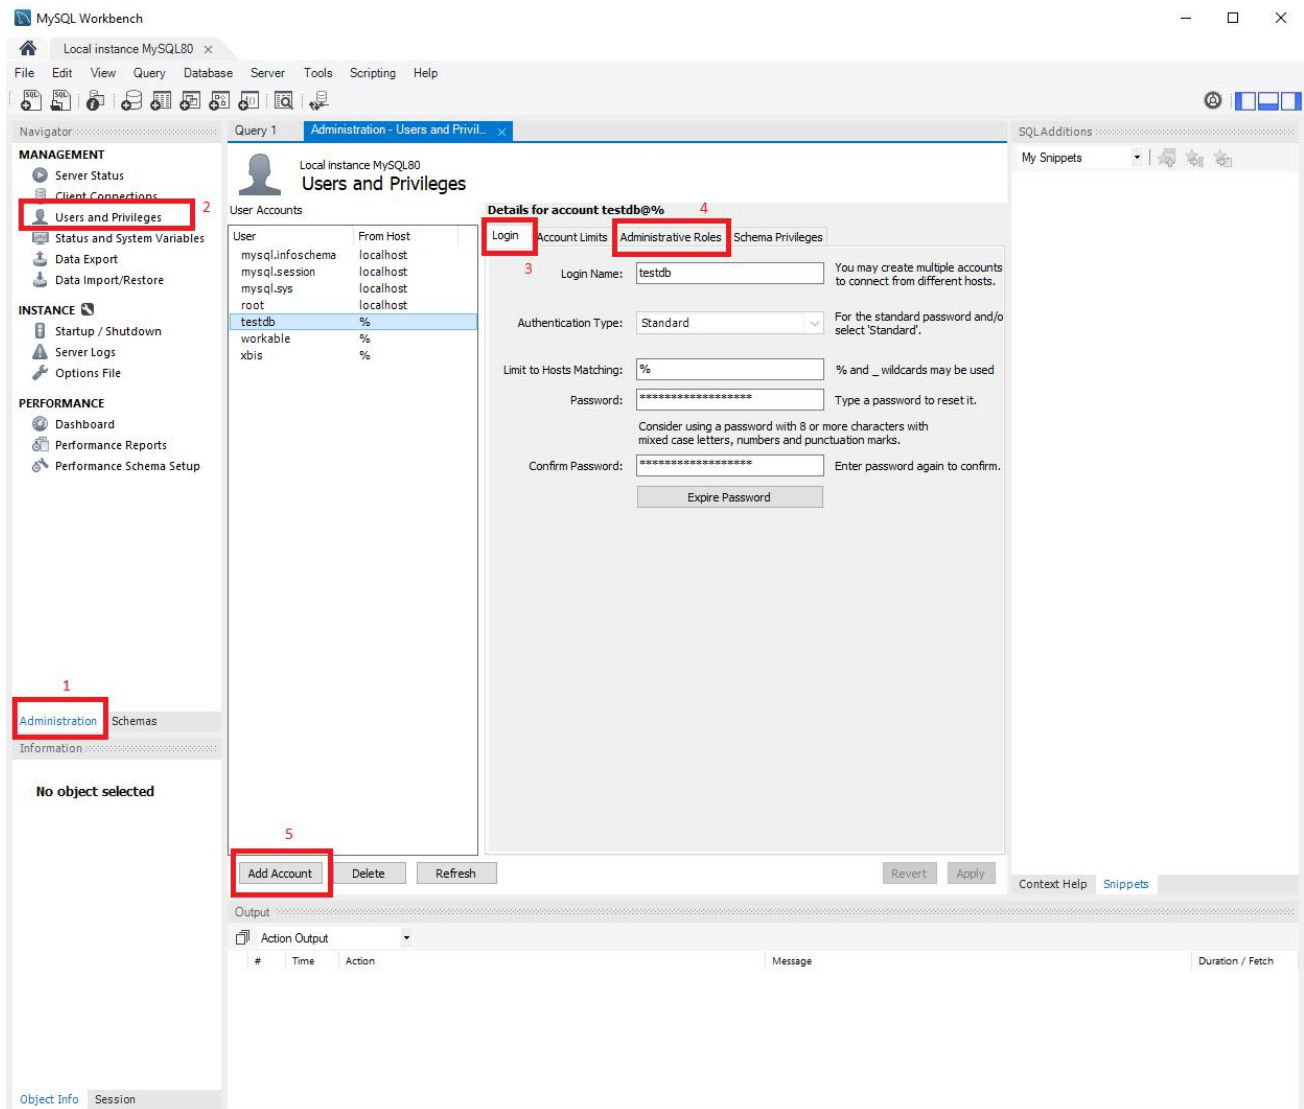

On MySQL Workbench go to Administration tab on the left-> Users and Privileges-> Add Account

Create a test account with login name 'testdb' and password '12345' and assign Administration Roles.

Or you can add a different account and change the username and password in the 'dispatcher-servlet.xml' file in the project directory.

On Eclipse -> right click project dir -> 'Run As -> Run on Server' and the project will open in your browser ready for using and testing.

# Tutorial

---

Upon opening the blog we are presented with the option to login or continue without logging in.

**Welcome to MovieRama!**

[Login](#)

or

[Continue to Home Page without logging in](#)

Let's continue without logging in. We can see all the added movies but we are not able to like or hate a movie.

If we look at our databases we can see that all our actions and changes have been successfully saved.

The screenshot displays the MySQL Workbench interface for a local instance of MySQL 8.0. The Navigator pane on the left shows the 'movieRamaDB' database with tables 'movie', 'user', and 'vote'. The central editor shows a SQL query: `SELECT * FROM movieramadb.movie;`. The Result Grid displays 11 rows of data from the 'movie' table, including columns for MovieId, Title, Description, UserId, Date, Likes, and Hates. The Output pane at the bottom shows the execution log, indicating that the query was executed successfully and returned 11 rows.

MovieId	Title	Description	UserId	Date	Likes	Hates
1	Big Star Wars Fan	Lorem ipsum dolor ...	1	2021-12-1...	4	0
